## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-5, 7, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Kitahara (US 2002/0005879 A1).

With respect to claim 1, Kitahara discloses a liquid ejection head (Fig. 1, element 1) comprising:

- a metallic cavity unit (Fig. 1, element 70, paragraph 0083), formed with liquid flow passages (Fig. 1, element 13) respectively continued from a common liquid reservoir to nozzle orifices (Fig. 1, element 10) via pressure chambers (Fig. 1, element 12);
- an actuator unit (Fig. 1, element 4), in which a plurality of piezoelectric elements (Fig. 1, element 21) are supported on a fixation plate in a cantilevered manner;
- a resin casing (Fig. 1, element 71), formed with a first face onto which the cavity unit is bonded, and

Art Unit: 2853

- an actuator chamber (Fig. 1, element 5) which accommodates the actuator unit therein such that free ends of the piezoelectric elements are abutted onto the cavity unit; and
- a metallic reinforcement member (Fig. 1, element 72), integrally molded with the casing such that at least a part thereof is buried in the casing at the vicinity of the first face (paragraph 0075, i.e. core),
- wherein the reinforcement member extends in the casing so as to surround the actuator chamber (paragraph 0073, i.e. surrounds the communicating port line 18).

With respect to claim 3, Kitahara discloses a whole body of the reinforcement member (Fig. 1, element 72) is buried in the casing (paragraph 0073, i.e. insert molding).

With respect to claim 4, Kitahara discloses the reinforcement member (Fig. 1, element 72) is formed with a hole filled with resin forming the casing (paragraph 0073).

With respect to claim 5, Kitahara discloses a part of the reinforcement member (Fig. 1, element 72) serves as the first face (Fig. 1, element 20A).

With respect to claim 7, Kitahara discloses the reinforcement member (Fig. 1, element 72) is comprised of a metal selected from the group consisted of stainless steel, nickel, aluminum, alumetized aluminum and nickel-plated aluminum (paragraph 0083).

With respect to claim 16, Kitahara discloses the reinforcement member is formed with a passage opening (paragraph 0073).

Art Unit: 2853

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Geoffrey Mruk whose telephone number is 571 272-2810. The examiner can normally be reached on 7am - 330pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on 571 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
